

Example template

Inserting variable is easy:

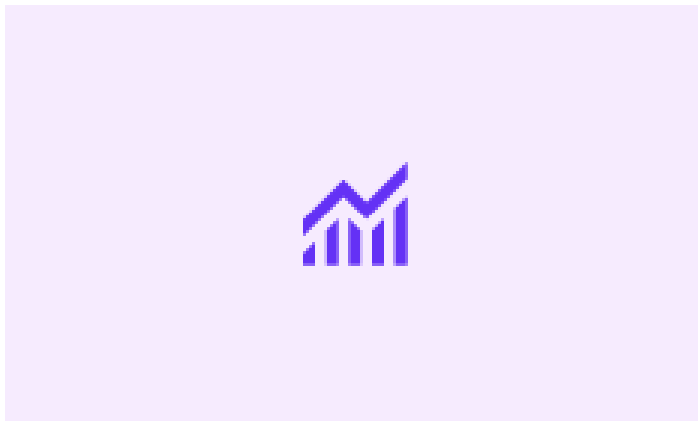

Variable: `${variable}`

To populate a table, provide an array variable:

ID	NAME	AGE
<code>\${table:users.id}</code>	<code>\${table:users.name}</code>	<code>\${table:users.age}</code>

Insert a placeholder image where you want the chart to appear.

Then, use the Block Editor's Image section to replace it with the generated chart.

To add chart, use `createChart` keyword followed by an index:

`${image:createChart1}`
