# Press release

*myMOBILE version 7 for Android*

May 27th 2016

Prague, Czech Republic

After a successful presentation of a Mobile HMI/SCADA application for iOS, mySCADA is proud to introduce a brand new version 7 for mobile operating system Android.

This application offers a unique possibility to control the processes from anywhere at any daytime. This makes the mobile application (myMOBILE) very helpful especially for those, who need to be in touch with their business constantly.

myMOBILE can be used for every mobile device such as smartphone or tablet. This smart application puts the main emphasis on a clear user-interface, easy installation and impressive scalable graphics.

Thanks to the versatility and complexity of the system, myMOBILE is suitable for a wide range of projects. myMOBILE can handle from small home automation projects to a corporate control that needs to be done by managers all around the world.

With just one click, the responsible person is able to check and optimise the production of a whole enterprise or close the garage doors of house "*from the other side of the planet*".

*Screen of a simple Home Automation project*

Appreciated advantage of myMOBILE is a direct communication with the factory though the application. Rely on facts from production floor and never miss any outrages in your processes, keep productivity at maximum.
